

Proactive POTS Line Replacement Strategy:

Leveraging Advantage® to avoid critical telephony system shutdowns and drastic rate increases with minimal effort.

60-80%

Average Cost Savings

30-90

Days to Migration Completion

0%

Risk of Downtime

THE PROBLEM

Service providers are **decommissioning traditional Plain Old Telephone Service (POTS) lines**, leaving your business at risk of:

- **400% monthly rate increases** for end-of-life services
- **Critical system outages** (alarms, fax, elevator, and emergency lines)

OUR SOLUTION

Advantage® will start by **conducting a thorough review** of your current telephony setup and provide **alternative options at a lower cost** than what service providers will charge you to maintain outdated POTS infrastructure. Our team of experts will then **seamlessly transition** your organization's legacy services to a more modern and reliable voice solution, and will always be available to offer **ongoing support and maintenance** for these essential services.

Business Case Assessment

Voice Solution Upgrade

Minimized Monthly Costs

YOUR RESULTS

1

Complete Service Continuity

Prevent potential disruptions to necessary emergency backups and fax lines by upgrading to a more reliable and resilient voice solution.

2

Avoid Dramatic Price Hikes

Carriers will begin charging **up to 400% more in MRC** to continue supporting these outdated copper lines. Why pay more for worsening service?

3

Improved Performance & Cost Efficiency

During our comprehensive audit, your business is likely to uncover additional voice savings and/or significant performance enhancement opportunities.
